PERSONAL SUMMARY

Software engineer and founder. I have completed my BE(Hons) in Software Engineering at the University of Canterbury, with graduation pending only the practical work-hours requirement. Alongside the degree I founded All Ears Events, a Christchurch production company, and I am the developer behind the three production systems it runs on: an operations platform, an event ticketing platform and a studio booking site, all in daily use by staff and customers. Seeking a graduate software engineering role where I can contribute from day one.

TECHNICAL SKILLS

Languages: TypeScript, Python, Java, SQL, C, C#, JavaScript

Frameworks & platforms: React, Next.js, FastAPI, Spring, Supabase, PostgreSQL, Stripe, Deno, Vite, Tailwind

Practices: REST APIs, OOP, TDD/BDD, CI/CD, Agile/Scrum, database migrations, row-level security, threat modelling

EDUCATION AND QUALIFICATIONS

2022 to 2026	University of Canterbury	BE(Hons) Bachelor of Engineering with Honours, specialising in software engineering. Degree completed; conferral pending the practical work-hours requirement. Class representative for COSC131 and COSC265.
2017 to 2021	Scots College Wellington	NCEA levels 1 to 3, levels 2 and 3 endorsed with excellence.

TECHNICAL PROJECTS

All Ears Crew (crew.allears.nz) - React, TypeScript, Supabase/Postgres, Deno

- Sole architect and developer of the operations platform the company runs on: quoting, crew scheduling, safety compliance, equipment tracking, warehouse label printing and a public client portal. About 39,500 lines of TypeScript, 91 database migrations, 213 row-level security policies, in production daily.
- Built unattended dry-hire pickup: customers self-schedule via a tokenised link and receive an automatically minted, time-boxed smart-lock door code. TTLock API integration using offline algorithmic passcodes, retry handling for a non-standard error model, DST-correct NZ time windows and a fallback code pool.
- Authorisation enforced once, in the database: an owner-editable 19-key permission matrix drives both the UI and the RLS policies through a shared function; public surfaces go through service-role functions returning strict field whitelists.
- Companion services: a headless Windows print agent that renders and prints warehouse labels unattended over outbound HTTPS only, and realtime Postgres subscriptions driving notifications, chat and a workshop wall display.

Unit 20 Live (unit20.nz) - Python, FastAPI, React, PostgreSQL, Stripe

- Event ticketing platform for our own shows, built with Joseph Hendry: Stripe payments, QR check-in, pre-sale ballots, promo codes, waitlists and event-wide refunds. \$54,000+ in payments processed to date without incident.
- Role-based admin dashboard with four roles and per-event staff scoping; append-only audit log; deployed to EC2 via GitHub Actions with mypy, ruff and pre-commit enforced on every change.

Unit 20 Studios (studio.unit20.nz) - Next.js, React, Supabase

- Studio booking site with online payment, banked-hour packs and a privacy-first ID verification flow: hashed one-time tokens, images behind short-lived signed URLs and deleted on approval.
- Shares one database with the crew platform, so a studio booking is automatically refused on days the decks are out on a job, enforced by a database trigger.

Final-Year Research Project, AML Compliance Tool - Python, NLP

- Document pipeline automating anti-money-laundering review for law firms: OCR with human-in-the-loop verification, entity extraction where every claim links to its source page, and cross-document entity matching.
- Rated by the industry partner's domain experts: 5/5 text extraction after verification, and 36 to 60 times faster than manual review.

SENG302 Agile Team Project - Java, Spring, React, SQL

- A full year building a production-ready web application in a 7-person Scrum team: RESTful Java/Spring APIs, React frontend, CI/CD pipelines and Cucumber BDD testing across short sprints.

EXPERIENCE

All Ears Events Limited - Director & Tech Lead | March 2024 to present

- Founded and run an event production and hire company supporting corporate events and festivals, including Rhythm and Vines, Red Bull and Twominds, with a crew roster and a compliance trail for every job.
- Replaced manual admin with software I wrote: self-service dry hire with automatic door codes, automated invoicing and collection instructions, and a client portal that keeps every job's details in one place.

Gravity Events - Systems Technician | Dec 2024 to Oct 2025

- Deployed sACN/Art-Net lighting networks across festival stages (Rhythm and Vines, Twominds, Electric Avenue); designed a custom Arduino DJ strobe controller integrated with Resolume.

University of Canterbury Students' Association - Lighting & Sound Technician | Apr 2022 to Feb 2024

- Designed and operated lighting for touring artists at Haere-roa; programmed consoles under tight deadlines.

Sub180 Entertainment - Event Management & Marketing | Oct 2023 to present

- Lead a student marketing team promoting Sub180 tours across NZ; coordinate artist logistics and equipment checks.
